

LEARNER JOURNEYS COMMENCING IN SEPTEMBER 2021

LEARNER JOURNEYS COMMENCING IN SEPTEMBER 2022

EXPLANATORY NOTES

The diagrams indicate learner journeys for occupational pathways covered by the new range of construction and building services engineering qualifications for learners in Wales. Please contact us for information relating to our approach to designating qualifications used for learner journeys in other occupational pathways at development@qualificationswales.org.

NEW RANGE OF QUALIFICATIONS

Details of the new Foundation, Progression and apprenticeship qualifications, which have been developed specifically for learners in Wales, can be found on the [Skills for Wales website](#).

APPRENTICESHIP (NEW)

Within new apprenticeship frameworks, there will be a number of requirements, including for the qualifications which will be taken. Depending on the learner journey taken, some learners may be exempt from some of these requirements.

CURRENT QUALIFICATIONS

Broad level 1 qualifications are those which typically offer generic or multi-trade experiences that introduce learners to the construction or building services engineering sectors. **Trade-specific level 1 qualifications** typically offer endorsed experiences that relate to a sole, specific occupational pathway. **Current apprenticeships** relate to currently active apprenticeship frameworks, typically offering knowledge and competence (or combined) qualifications, including NVQs, at levels 2 and 3.
